5. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Art Unit: 3662

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 1, 4, 5, 10-13, 19, 25, 28, 29, 34-37 and 43 are rejected under 35

U.S.C. 102(b) as being anticipated by Evans ('126).

8. As best understood, the claims are considered to be met by Evans ('126) who show a transmitter-receiver system including, inter alia, a MMIC designed such that simultaneous transmission and reception of mm signals is achieved via antenna elements (D, D1, D2, D3, D4). Signals are fed via mixer (F, 14, 16). This is accomplished through the module design of the disclosed structure. Evans disclose such a circuit is suitable for either hybrid or GaAs monolithic microwave integrated circuit (MMIC) implementation and contains components to allow the simultaneous transmission and reception of signals. See column 1, lines 38-44.

Evans ('126) show in Figure 1 (reproduced below) the MMIC designed transmitter-receiver system. Figure 2 (reproduced below) shows an end view of the substrate design.

Allowable Subject Matter

9. Claims 2, 3, 14-18, 20, 21, 26, 27, 38-42, 44, and 45 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion
